ARGUS Automated Surveillance Alert

Case Number:	ARGUS/2026/9DDD41E0	Date of Detection:	28 Mar 2026
Exchange:	NSE	Case Status:	DRAFT
Generation Date:	28 Mar 2026 14:04 UTC	Classification:	STRICTLY CONFIDENTIAL

SECTION 1: EXECUTIVE SUMMARY

ARGUS has detected a **potential market manipulation incident** with an impossibility score of **8.70 / 10.00**. The system flagged the scrip **DEMOBROADCAST** on exchange **NSE** during the period **2026-03-28** to **2026-03-28**.

Scheme Type Detected: **PUMP AND DUMP**

Detection Engine	Score	Weight	Contribution
Temporal Coincidence Network (GNN)	9.40/10	35%	3.29
Zero-Day Anomaly Ensemble	8.20/10	25%	2.05
Behavioral DNA Autoencoder	7.10/10	25%	1.77
Cross-Market Phantom Detector	6.80/10	15%	1.02
COMPOSITE IMPOSSIBILITY SCORE	8.70/10	100%	—

SECTION 2: ENTITIES UNDER INVESTIGATION

#	Account ID (Anonymized)	Entity Name	Status
1	ACC001	DEMO ENTITY A	Flagged
2	ACC002	DEMO ENTITY B	Flagged
3	ACC003	Under Investigation	Flagged
4	ACC004	Under Investigation	Flagged
5	ACC005	Under Investigation	Flagged

SECTION 3: EVIDENCE

3.1 GNN Coordination Evidence

The Temporal Coincidence Network identified coordinated trading behaviour among 5 accounts in DEMOBROADCAST. The GNN model detected temporal coincidences (trades within 50ms of each other) at a frequency inconsistent with independent random trading. GNN Score: 9.40/10.

3.2 Behavioral DNA Evidence

The Behavioral DNA Autoencoder identified account fingerprints with high cosine similarity to known fraudsters in the SEBI enforcement database. DNA Match Score: 7.10/10.

3.3 Cross-Market Evidence

Cross-market analysis of NSE/BSE/NFO/MCX segments detected phantom positions and circular trade flows involving DEMOBROADCAST. Cross-Market Score: 6.80/10.

3.4 Zero-Day Anomaly Evidence

The anomaly ensemble (IForest + LOF + HBOS + OCSVM) flagged statistical features of the trading session as highly anomalous relative to the normal order-flow baseline. Zero-Day Score: 8.20/10.

SECTION 4: STATISTICAL BASIS

Scoring Formula: Overall = $0.35 \times \text{GNN} + 0.25 \times \text{ZeroDay} + 0.25 \times \text{DNA} + 0.15 \times \text{CrossMarket}$

Poisson Null Model: The probability of observing the detected number of temporal coincidences by random chance (under a Poisson model with the observed trade rate) is $p < 10^{-9.4}$, which is astronomically small and confirms deliberate coordination.

KS-Test: The inter-trade timing distribution was found to deviate significantly from the exponential distribution expected under natural order flow, providing additional statistical confirmation of coordination.

Estimated Gain from Manipulation: ■4,750,000.00

SECTION 5: RECOMMENDED ACTION

Recommended Action: IMMEDIATE FREEZE AND FORMAL INVESTIGATION

1. Freeze trading accounts of all identified entities pending investigation.
2. Issue Show Cause Notice (SCN) to all flagged account holders.
3. Subpoena broker records and order logs for the detection window.
4. Coordinate with MCA/ROC for corporate structure verification.
5. Cross-reference with PMLA/FIU databases for suspicious transaction reports.
6. Refer to SEBI Enforcement Division for formal adjudication.
